- According to the WHO (World Health Organization), breast cancer is the most common in recent years
- There is useful information in unstructured notes in EHR (Electronic Health Records)
- Structuring this information can help, e.g. clinicians in their next clinical judgements

Common Types of Cancer (New Cases) - 2015 to 2020

World Health
Organization

Aims

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

1

To evaluate NLP tools for extracting useful information from unstructured data in HCIS in Spanish

2

To convert the extracted information into structured data that can be used by computer systems in HCIS

3

Develop an automated NLP pipeline that can extract the most important information from a given clinical note

State of the art in NER

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- Deep Learning is the most used technique for NLP today to extract entities from text (NER)
Specifically, models with Transformer architecture are the ones that yield the best results (BERT)
- There is no corpus for NER focused on cancer in Spanish

Transformers

BERT (Bidirectional Encoder Representations from Transformers)

UNIVERSIDAD
COMPLUTENSE
MADRID

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- Bidirectionally connected Transformers cells
Encoder only
- Language Model (LM)
Depending on the corpus with which it is pre-printed has a name, ours is called multilingual BERT
It can be used for NER, doing a finetuning

NCP - NLP Cancer Pipeline

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA

- Module that converts a judgment note written by clinicians to JSON

juicio clínico:
carcinoma ductal
infiltrante en mama
derecha.

tratamiento:
masectomia +
quimioterapia.

```
EHR : 2323
▼ Diagnostics [1]
  ▼ 0 {5}
    Cancer Concept : carcinoma
    Cancer Type : ductal
    Cancer Expansion : infiltrante
    Cancer Location : mama derecha
  ▼ Treatments [2]
    0 : masectomia
    1 : quimioterapia
```

NER (Named Entity Recognition)

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- The initial step prior to structuring is to acquire the entities present in the text

evaluacion de la respuesta patologica (miller y payne):

g5 **CANCER_GRADE** ausencia de celularidad tumoral **infiltrante CANCER_EXP** en la **mama CANCER_LOC** y
tipo b **ganglios linfaticos CANCER_LOC** con **metastasis CANCER_MET** y
sin cambios por quimioterapia en valoracion **ganglionar CANCER_LOC** . no **invasion CANCER_MET** **linfovascular CANCER_LOC**

evaluacion de la respuesta patologica (miller y payne):

g5 **ausencia de NEG** **celularidad tumoral infiltrante en la mama NSCO** y
tipo b **ganglios linfaticos con metastasis y**
sin NEG **cambios por quimioterapia en valoracion ganglionar NSCO** . **no NEG** **invasion linfovascular NSCO**

Data Description

Data Source

- 3000 patient notes from clinical judgments
- Technical vocabulary with acronyms specific to each doctor
- Texts with grammatical errors

Manual
Selection

Corpus (without annotation)

550 notes from different
years and different patients.

Preprocessing

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- The purpose is to facilitate the learning of entities by the model
Depending on the input format may consist of more phases as anonymization or removal of links
- It is applied before annotate and before the model predicts

Corpus Collection

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- Obtaining good data is crucial in NER

Stages to obtain a NER model

UNIVERSIDAD
COMPLUTENSE
MADRID

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- Generating a NER model is an iterative and incremental process
The number of entities required for each tag depends on the architecture

Software:

1. Leer las notas de Base de Datos SQL
2. Corregir y des-acronimizar las notas con regex.
3. Anotar las notas en Prodigy
4. Entrenar y evaluar modelos NER con spaCy
5. Usar los modelos de spaCy y técnica de similitud y regex para normalizar y estructurar.
6. Volcar las notas a MongoDB.

NLP Cancer Pipeline

- Automated pipeline that processes notes in batches or online processing
- Create a structured cancer information format that can be easily analyzed or extracted

Experimentation

Distribución de las entidades

* To take advantage of a supercomputer it is mandatory to develop parallel programs

Results & Discussion

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

- Clinical NER has good results
- Negation & Uncertainly NER has reasonable results
- Since obtaining clinical entities is conditioned on whether the sentence presents negation or uncertainty, it is necessary to assess the feasibility of including it in the pipeline

Model	Test	Precision	Recall	F-score
Clinical NER	10-fold	0.9346	0.9366	0.9356
Negation & Uncertainly NER	80-20	0.873	0.859	0.866

Conclusions and Future Work

Conclusions

UNIVERSIDAD
COMPLUTENSE
MADRID

UNIVERSIDAD
POLITÉCNICA
DE MADRID

NCP -NLP Cancer Pipeline-, capable of processing clinical notes in Spanish, producing a structured JSON file

Deep learning-centric methodology for structuring the extraction of breast cancer information

Necessity of detection of negation and uncertainty to structure clinical notes

Annotation schema proposed to extract detailed and specific concepts for cancer diagnosis and treatment

Machine learning models >> regex, but less interpretable

Future work

UNIVERSIDAD
COMPLUTENSE
MADRID

POLITÉCNICA

UNIVERSIDAD
POLITÉCNICA
DE MADRID

Consider investigating alternative language models designed for processing Spanish clinical text, such as RoBERTa-bsc-bio-ehr

Improve the performance of Negation & Uncertainly Model

Pretrain a LLM with cancer domain literature to enhance the results

Finetune LLMs text2text to struct more complex notes

Thanks!
